A wage goods paradigm is developed on the hypothesis that the wage goods sub-economy is at the core of the economy of a developing country. The economy's residual activities are classified as non-core sub-economy. The wage goods model, the report suggests, should form the core supplemented by mecro economic policies. The market forces should operate partially in order to allow a higher rate of exports, to induct better incentives for production and savings, to reduce Government expenditures, to improve the fiscal health of the economy and to modernise technology. In the wage-goods strategy priority is accorded to the expansion of production capacity of the wage-goods.

(c) and (d) The ideas contained in this report and many other ideas on development and the planning process are kept in view while preparing the Eighth Five Year Plan.
